

The Science of Plants

A Hands-on Class about the Scientific Method and Plant Biology

Learn about the great diversity, physiology, and lives of plants! We'll explore plants both on a cellular and systemic level. You will also learn about the scientific method and complete your own experiment -- growing radishes under various conditions.

This online and hands-on class takes place on Saturdays and Sundays at 2:00 PM over four weekends, with Q&A sessions on Wednesdays at 7:00 PM. Start date: June 20. End date: July 12.

The Experiment: You will give radish seedlings various sources of nutrition to see which will grow the best. You will get to experience the scientific method hands-on through this immersive experiment. Socially-distanced pickups of lab materials will take place during the week of June 15. The specific location will be provided to participants after registration. **Register here:** <https://forms.gle/65STWQbbTfXxTZ9P6>
